Pull Request Title

FEAT: Azure DevOps Integration, Enhanced Validation, and Dashboard Improvements

Summary

Integrate AZDO for project tracking, implement strict input validation for project names and file uploads.

Filter out system repositories from dashboard, and add skeleton loading states.

Key Changes

Features / Enhancements

- **Azure DevOps Integration:** Implement integration with the AZDO API to fetch and track projects.
- **Project Name Logic:** Add deduplication checks to prevent creating projects with names that already exist in AZDO.
- **Dashboard UX:** Add skeleton loading states for the User Dashboard and Project Details pages.
- **Repository Filtering:** Implement filter to hide system repositories (appcentral, base, pipelines, terraform) from the main dashboard.
- **Footer Update:** Update "Report Vulnerability" button to link to <https://go.gov.sg/report-vulnerability>.

Refactors / Style Updates

- **Dashboard Architecture:** Migrate dashboard page logic to dynamic routes.
- **Code Cleanup:** Centralise project schemas.

Security & Compliance

- **Input Validation:**
 - **MIME Type Checks:** Add validation to ensure only valid .zip files are uploaded.
 - **Strict Naming Conventions:** Enforce regex validation for project and domain names.
 - **Sanitisation:** Add checks to prevent special characters in file uploads.

Security & Compliance

- [x] Security patches applied (Input validation)
 - [x] Vulnerability mitigations (Strict file and name validation)
 - [] Authentication or authorisation changes
 - [] Secrets or credentials rotated
-

Final Checklist

- [x] PR title follows convention (Release: ..., Feat: ..., Fix: ..., Refactor: ...)
- [x] Summary and descriptions are complete and clear
- [x] Code builds successfully
- [x] Tests and lint checks pass
- [x] Related work items linked

- [] Security and secrets validated
- [] Documentation updated (if applicable)
